# Adding a Hyperlink

Adding a hyperlink to a learning screen can be a great way to reference online materials that could be useful to your learners without having to add the information on the screen.

To add a hyperlink:

1) Select the text you want to use as the clickable option (this can be an entire textfield or selected words within a textfield) so that the textfield Properties Panel is displayed.

2) Ttype the web address you want to link to in the **Hyperlink** box:

Note: The web address needs to be entered in it's complete form, so you will need to include http://www otherwise the link will not work correctly.
