

When you add a multiple choice question to your screen, by default only the question and one possible answer will appear on screen. You can increase the number of responses by changing the question properties:

- 1) Select the question object so that its properties are displayed in the Properties Panel:

- 2) In the Properties Panel, increase the value in the **# Choices** box using the buttons available:

**Tip:** Create and format the first available option first, then increase the number of options available as they will be created as a duplicate of the existing one. This will save you time when you are creating a multiple choice textfield, animations or shapes question as you will not need to format your options every time you add new ones.
