

Locking Objects

When you are working on a very busy screen it can be very useful to lock some of the objects you have already finished with, so they don't get in your way when working on other elements and you do not accidentally amend them.

To lock an object, select it in the screen, then click on the **Lock object** button on the **Tools** toolbar:

There is also the option to lock an object from within the **Timeline events** toolbar.
